Run overview

File: **load_1_user.csv** · Start: 2026-10-29 08:44:57 UTC · Last sample completion: 2026-10-29 08:45:02 UTC · Estimated duration: 4.72 seconds

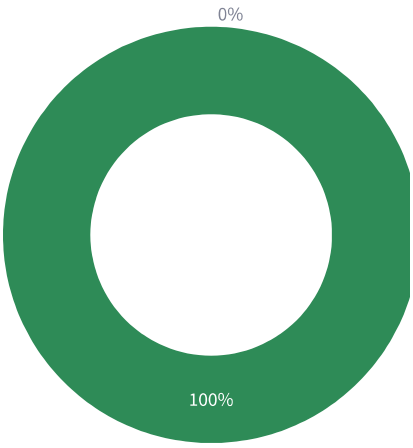

Total samp…	Avg response	P95 response	Overall thr…	Error rate	Max active …
50	94.…	20…	10.…	0.0…	1

*Throughput is estimated as completed samples divided by the timestamp-derived run span. It may differ from JMeter's official throughput because the CSV may not record exact test start/end boundaries.

Samples by response code

Response time by transaction

Average vs P95 response time (top 5 by average)

Automatic observations

- Slowest transaction by average response time: **Get Single Post** (133.1 ms average; P95 315.8 ms).
- Overall sample count: **50** across **5** transaction label(s).
- No failed samples were detected in the uploaded results; this does not by itself prove the application is defect-free.
- P95 is more than twice the average response time, suggesting a long-tail latency pattern worth investigating.
- Maximum active thread count recorded: **1**.

Interpret results in context: workload, environment, test duration, and sample count affect conclusions. Use only systems you own or are authorized to test.
