Run overview

File: **load_1_user.csv** · Start: 2026-10-29 08:44:57 UTC · Last sample completion: 2026-10-29 08:45:02 UTC · Estimated duration: 4.72 seconds

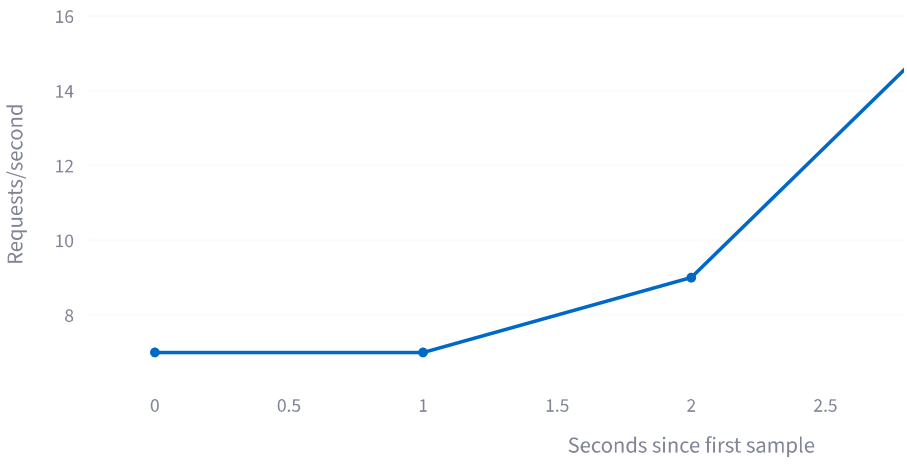

Total samp…	Avg response	P95 response	Overall thr…	Error rate	Max active …
50	94.…	20…	10.…	0.0…	1

*Throughput is estimated as completed samples divided by the timestamp-derived run span. It may differ from JMeter's official throughput because the CSV may not record exact test start/end boundaries.

Overview | Response Time | Throughput | Concurrency | Errors & Status | Transactions & Sar

Throughput over time

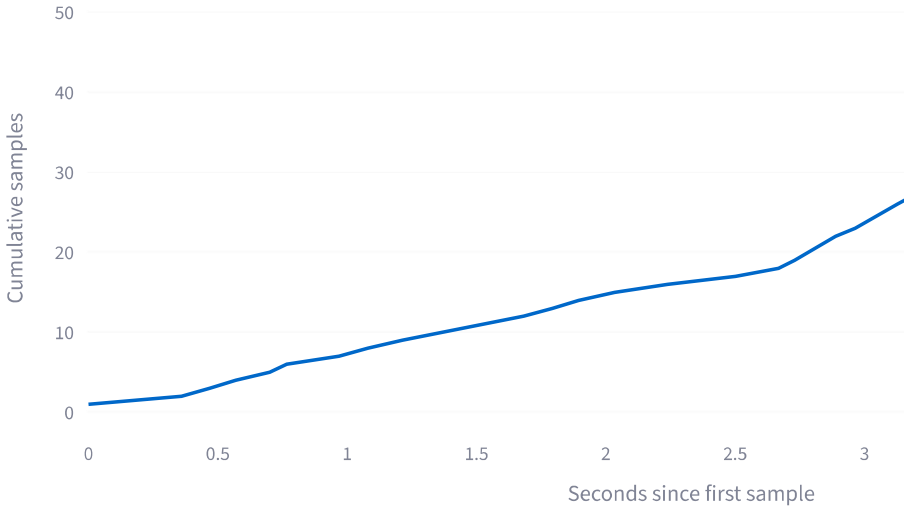

Requests per second by 1-second bucket

The first and last buckets can be partial. The chart divides each bucket's count by the selected bucket width, so edge buckets may understate the rate.

Cumulative completed samples

Cumulative sample starts over time

Interpret results in context: workload, environment, test duration, and sample count affect conclusions. Use only systems you own or are authorized to test.
